

# This really won't work...

For a while, my laptop's screen started working again. I took it in to have it checked out, and they cleaned some contacts in hope that it would solve the problem. It did for a while. Buy now, it stopped working again. I guess I need to fork over some cash now to get a new backlight.

Right now I have it hooked up to my TV, but I have to sit too close so I can see the writing. Just not a comfortable way to do this unless I move the couch to within 2 feet of the TV, or set the screen resolution to a bigger size, so I can see the print from across the room. Oh well, I hope to back up the drive tonight and take the machine in tomorrow.

I also finally hooked up a wireless keyboard to the machine. This actually works very well. I've had the keyboard/mouse for a long time, I just never bothered to hook it up. I was hoping to be able to sit across the room looking at the TV screen.

I just set the screen to a different resolution, and can almost make out the print from across the room. I could definitely play computer games this way. I just don't play that many computer games.

Maybe I could use this to watch baseball soon. If my connection speed is still good, I may have to sign up for the MLB package.
