

Stars out at night

Well, I got a small telescope for my birthday in February. I was able to take it out for a short time soon after that, but the weather was too cold to stay out long. The other night, I was able to take it out for a longer period. It wasn't too bad for the size and design, maybe someday I'll write a review for it.

What was really nice about that night was being able to share this night with one of my daughters. Normally I spend my nights alone with the stars, but it was nice to have a little company. It was still a bit chilly, so the night was shorter than it could have been. She's taking an astronomy course and was doing a 'lab' assignment. It felt good to help her out.

This got me thinking of her growing up. Back when she was in grade school, I gave a talk to her class about telescopes and astronomy. I brought in my telescope, and a few items of astronomical interest. Later that school year, we had a 'star party' for kids at the school. I'm not sure if it sparked any future interest in that class, but it was made my evening. Their questions were intelligent, and they seemed to enjoy themselves.

I was quite a bit younger when I saw my first telescope. I was about 5 or 6, when my dad brought home a small scope. I don't know what we looked at, but I was hooked on astronomy from that very day. Funny how I still remember that day. What in your life changed your outlook on life?
