

# Green numbers on the clock

I've been pondering the past few months on the choice I made a couple of years ago on my alarm clock. The numbers are BIG!!! For my aging eyes that is a good thing. There is a problem, the clock is very bright. Most nights, I really don't notice it, but when I am having trouble sleeping (tonight!!), the clock just seems to light up the room. While it isn't quite bright enough to read by, I don't have to turn on a light to make my way around anything I may find on the floor (dog?). I've been wondering if I shouldn't have looked for a different alarm clock. Tonight those BIG GREEN numbers are just passing by keeping me awake.

Really, I'm a bit of an insomniac anyway, so on some nights it doesn't take much to keep my eyes open. I also have other complaints about the clock, but it does wake me up on most mornings, so it isn't all bad. Even after staying awake half the night, the alarm/radio is loud enough to wake me.

But I did get my green in didn't I.... One more color to go.

Now on to other "Green" things. The \$\$Cost\$\$ of gasoline this last weekend skyrocketed on limited supplies. I've heard of places where they have run out of gas, or even gas going for over \$5.00 per gallon. This is when Oil prices dropped to below \$100 per barrel. Now I realize the recent Gulf Coast Hurricanes disrupted the supply lines, but you would think after all these years of Hurricanes people would think to move as much gas as possible before the storms hit. Maybe not, but I think I would have done that. Shutting everything down is all well and good, especially since it does keep people safe, but some forethought is also needed. Just trying to save some of my green.

The green leaves are starting their fall change already too. Some of the early turners in this area are the Ash, Hickories

and Walnuts. Driving through the country side you can see the few yellow/brown leaves in the small wood lots. Don't blink though, these trees lose their leaves quickly. I remember going to college and the campus had mostly tall Hickories around the buildings. By Mid to late September all the leaves were gone from the trees. Made fall come very quickly. And if I remember correctly, they got their leaves later in the spring than other trees too. Long winters in NW Ohio...

One more color on my small list of eight crayon colors... And then maybe something else.. I never know where my thoughts will lead...

---

## **Unforseen Side Effect Of Hurricanes**

With all the storm activity in the Atlantic Ocean lately, I've been especially interested in hurricanes. I've lived a lot of places, but since I've only resided in the midwest, I've never witnessed a hurricane firsthand. Well, that's not entirely true. There was a hurricane a couple of years ago (I forgot its name unfortunately) that ventured up to our corner of Ohio. By the time it got here, it had been over land for quite some time which had reduced it to nothing but rain, lots of rain. It was really no different than any other rain we've gotten, except that I had been watching the radar, and I knew that it had been a hurricane in a past life – that made it special to me; I really enjoyed it.

Anyway, last night, the baby decided to wake up right as we were going to bed, so I was stuck watching tv while I fed him. And it's strange, because I really used to enjoy tv, but

that's changed for me recently. Maybe it's because we are so busy all the time so I got used to not watching tv... I don't know what it is. All I know is that I used to be the kind of person who could be happy watching anything on tv – I could find something that would entertain me at any time of the day or night. Not so much anymore. I still like tv, and I love watching my favorite shows (like The Office – almost time for new episodes!!!), but “junk tv” as I call it (reality shows, documentaries, etc.) isn't so appealing anymore. My point in detailing all of this is to explain how interesting I found some random documentary I caught last night on the History Channel while I was feeding my son.

The documentary was about giant snakes, specifically pythons, and how they are starting to become a threat to people in Florida. What I found most fascinating about this is the fact that these snakes are not indigenous to the United States, but in 1992, when Hurricane Andrew hit Florida, many pet stores and homes that had kept these animals as pets were destroyed. Baby pythons were released into the wild and because of Florida's tropical climate, especially in the Everglades, these animals now have a wild population that is thriving. On the show, they had pictures of one snake that had swallowed an adult human whole. They weren't sure if the pictures were real or a hoax, and unfortunately I never found out because my son let me go to bed before the show was over. They also had pictures of a snake that had swallowed a 6-foot-long alligator whole, but it had ruptured the snake, causing his death. In the words of a snake expert on the show, “snakes can digest anything” – it's just that the alligator probably clawed the snake open. But you could see the outline of the alligator in the snake – it looked like an alligator colored like a snake – it was bizarre.

I may have to find this documentary again so I can watch it when I'm not half asleep. But it's really interesting to me that because of a hurricane, Florida now has another fearsome

reptile lurking in the Everglades. I'm sure that was the last thing on people's minds after Hurricane Andrew wreaked its havoc 16 years ago – I bet this scenario didn't cross anyone's mind. Who knows what unforeseen side effects we'll see from Hurricane Katrina in a couple of decades? One can only imagine...
