

Fire and Rain

I have relatives all over this country. Some I know quite well, others not so well. But just about a month ago, my daughter was in the middle of some wildfires blazing in her area of Florida. Now my little sister is in the midst of massive flooding in Iowa. I suggested putting the water in buckets to carry it to the drought areas, but I think the cost of that is a bit much.

This did get me thinking about all the things that happen and get out of control.

Fires, on one hand they are beneficial. For warmth, cooking, light, ambiance, and at one time protection, fire is wonderful. Out of control, it can be a very destructive and fast moving force. After seeing the destruction of a wild fire, it is a wonder how anything can survive them.

As bad as that is the destructive force of the wind (hurricanes and tornadoes) can overwhelm our control at an even quicker pace than fire. There is nothing humanly possible to stop the quick and often deadly force of the wind.

And finally rain and floods. If you've ever seen the power generated by flood waters first hand, you would know enough to stay very clear of them. As little as 1 foot of quickly moving water can move a full size car. Just recently on the news 2 story houses were shown washing away in the power of a flooded river. Bridges, road, houses, and the land itself are washed away by the power of water.

We need the air, rain and even fire (I don't care what you use to heat your house I bet something is burning to provide it) to survive and flourish, but we need to heed the hidden strength these things carry. It can sometimes make you feel very small to see the power released.
