Multitasking

As I sit here typing away at this blog, I have three other computer related tasks going on. I'm transcoding/burning two DVD's, I have a load of laundry going, I'm re-installing some software on another computer, and finally checking out a laptop to make sure everything is working properly. If you include the fact that one of the DVD's is being burned on a Linux box, you could say I'm learning a different OS too. Why am I doing all of this now? Good question, and it is one I asked myself. I spent the better part of this evening installing some new and improved hardware on my main computer. It is the one I do most of my DVD work on, and I was just bogging the system down. I noticed I was able to transcode and burn a DVD faster on my laptop, than the main box. Something isn't not quite right there. I knew I had a problem with the video card in the main box, so I swapped that out.. I also put in a dual core processor, since that is what my laptop has in it. After all that work I had to put the machine through its paces, didn't I? And Now I think the box with twice as much memory, a faster processor, and more disks space finally catches up with the laptop. I don't think my hard drives on the desktop are nearly as fast, and I think that is what is slowing the desktop up this time…

Dryer buzzer, time to get the laundry.
